

Creating a Project

Published on 01/10/2018

To initiate a new project, navigate to the Projects list, and click **Add Project** in the top right.

The Projects sub-navigation has two list views. Adding a project from the **My Projects** list will automatically assign that project to you when creating a single **New Project**. If you create a new project from the **All Projects** list, it will be unassigned by default.

Select **New Project** to create a single project, or click **Import** to load multiple projects into your account.
