

# Release Notes 1.10.0

Published on 08/01/2018

## New Features

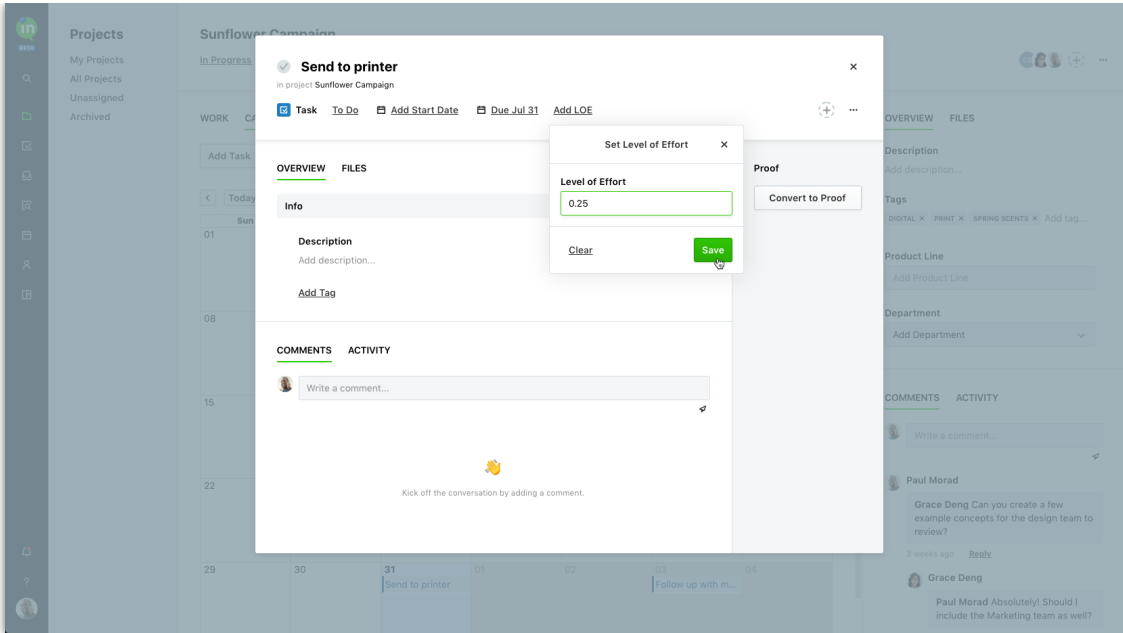

### Self-Registration

Allow your Stakeholders to create their own accounts! With the new self-registration feature, your Stakeholders can sign up to create their own accounts and start requesting and reviewing work without delay. Visit the General sub-navigation in Account Settings to enable this for your account.

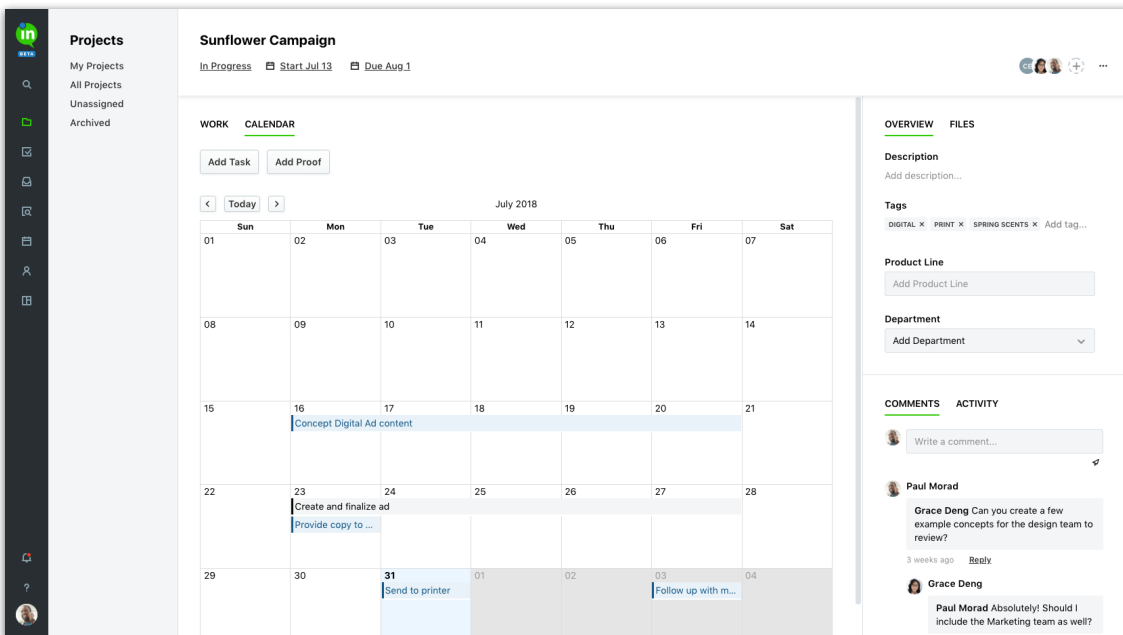

### Level of Effort

Predicting workload? Start by adding a Level of Effort to tasks and proofs. Add these estimations will help set expectations for team members and improve scheduling!

## Calendar View of Projects

If you need help visualizing a project, check out our newest calendar view! Easily toggle between the Work and Calendar tabs of your project details to see the start dates and due dates of all project work.

## Request Tagging

Organize your job requests with tags! Team Members can now tag requests before approving them. Any tags added to request will also carry over to the associated work.
