

Release Notes - April 6, 2020

Published on 03/31/2020

New Features

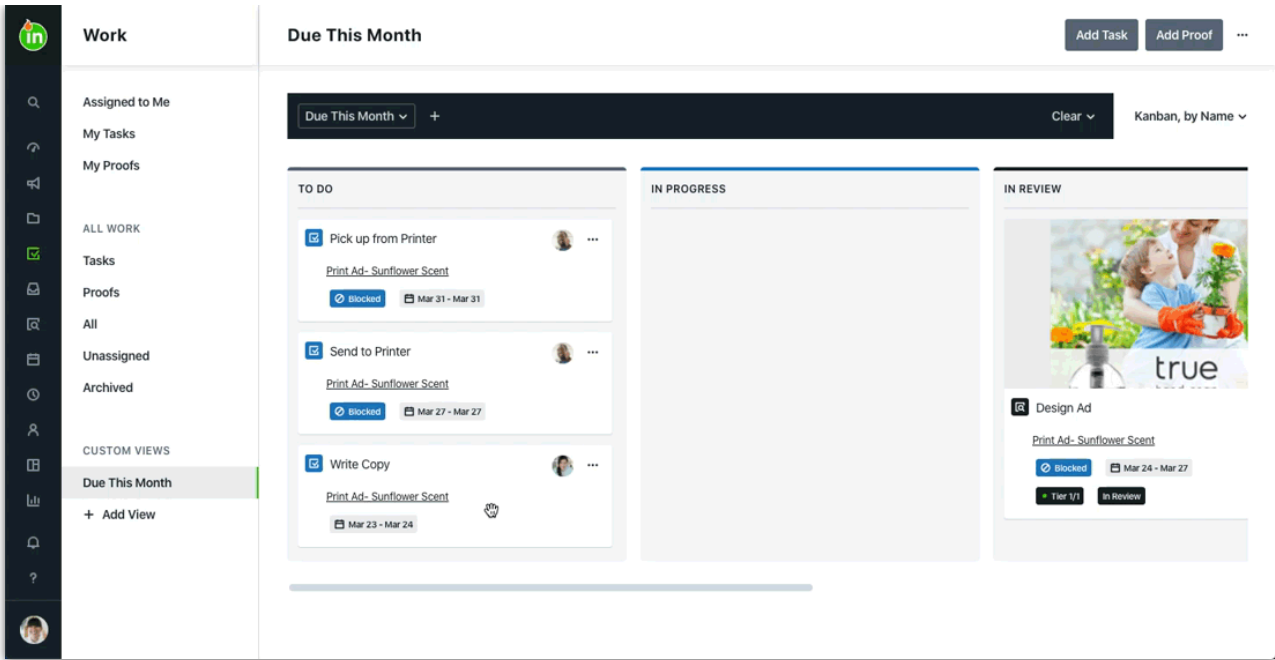

Project & Campaign Auto-Naming

Do you have a special way of naming your projects and campaigns? Now you can create unique auto-naming formulas to apply during creation of campaigns/projects. Auto-naming helps your teams ensure consistency in your naming structure while automating a previously manual naming process.

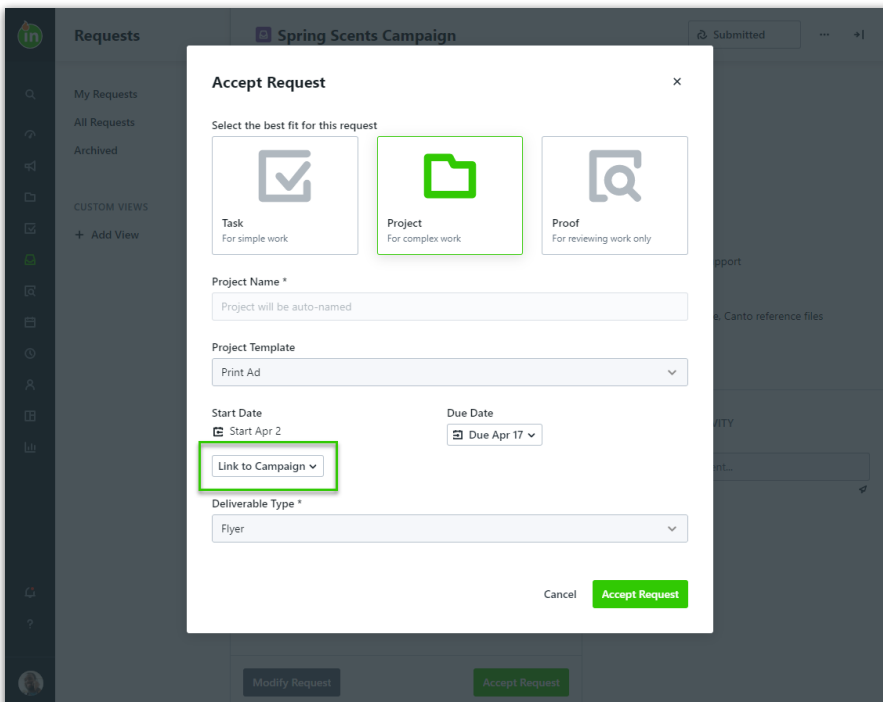

Kanban Custom Views

Now it's even easier to stay organized with an exciting new visualization of your team's work. Within the kanban custom views, you can see cards for each task and proof organized by status and save custom filter settings to quickly see important information at a glance. Simply drag and drop to update your statuses.

Improvements

- Added the ability to link a task or proof to an existing project when accepting a request
- Added the ability to link a project to an existing campaign when accepting a request

- Updated user experience for Report Sharing

Reports
