# Release Notes - August 22, 2020

Published on 08/18/2020

New Features

Data Warehouse*

With this add-on feature you can combine your inMotion ignite data with the rest of your organization's operational metrics in your preferred Business Intelligence platform for increased automation, customization, and visualization of all your data to clearly show the impact that creative work has on meeting key business objectives. Learn more about adding Data Warehouse for inMotion ignite to your subscription by scheduling a call (https://calendly.com/tcoleyinmotionnow/data-warehouse-for-ignite) with our Sales Team!

* Data Warehouse for inMotion ignite is available for Business and Enterprise customers.

Improvements

Next Incomplete Item Reporting

Project custom views (https://guide-ignite.inmotionnow.com/help/custom-views) & reports (https://guide-ignite.inmotionnow.com/help/reporting-work-reports#projects-report-available-columns-filters) now have an additional data point to leverage, the Next Incomplete Item Due Date. When paired with the Next Incomplete Item, you'll be able to provide even better macro-level insights into what needs to be tackled next and which projects might be at risk.

File Timestamps

Want to know when a file was uploaded or versioned? Now instead of searching through Activity, you can see the upload timestamp next to each file for easier file management and team alignment.

Additional Default Notification Preferences Per Role

Additional Preferences have been added to the Notifications tab under Roles (https://guide-ignite.inmotionnow.com/help/creating-roles#selecting-default-notifications-options) in Account Settings. These include digest preferences and notifications related to dependencies*.

Additional Preferences

Suppress notifications for work that's blocked

Email Frequency   Immediately

Save   Cancel

Dependencies are available for Business and Enterprise customers.

Feeling nostalgic? Here's what we released...
